

introducing liquified lipstick composition into the volume generally corresponding to the lipstick core and solidifying the lipstick composition to form the lipstick core;

providing a second mold having an internal volume generally corresponding to the lip cosmetic;

positioning the lipstick core into the internal volume generally corresponding to the lip cosmetic, leaving a lip liner volume; and

introducing liquified lip liner composition into the lip liner volume and solidifying the lip liner composition to form the coating of lip liner around the lipstick core;

wherein the liquified lip liner composition has a higher melting point than the lipstick composition.

REMARKS

Applicant has amended claims 1, 15 and 17 to recite that the lip liner composition has a higher melting point than the lipstick composition. Support for these amendments may be found throughout the specification. See, e.g., page 12, lines 8-11.

None of the amendments adds new matter. Their entry is requested.

APPENDIX OF AMENDMENTS

1. (Amended) A lip cosmetic comprising:

(1) an elongated lipstick core; and

(2) an outer layer of lip liner around the periphery of the lipstick

core, wherein the lipstick core comprises at least about 50% by weight of the lip cosmetic
and wherein the composition of the lip liner has a higher melting point than the composition
of the lipstick core.

15. (Amended) A method for preparing a lip cosmetic comprising an
elongated lipstick core and an outer layer of lip liner around the periphery of the elongated
lipstick core comprising:

providing a mold having an internal volume generally corresponding
to the exterior shape of the lip cosmetic;

inserting into the mold a lipstick core mandrel having a shape
generally corresponding to the shape of the lipstick core, leaving a lip liner volume;

introducing liquified lip liner composition into the lip liner volume
and solidifying the lip liner composition to form what becomes the coating of lip liner;

removing the lipstick core mandrel from the mold leaving a lipstick
core volume; and

introducing liquified lipstick composition into the lipstick core
volume and solidifying the lipstick composition;

wherein the liquified lip liner composition has a higher melting point
than the lipstick composition.

17. (Amended) A method for preparing a lip cosmetic comprising an elongated lipstick core and an outer layer of lip liner around the periphery of the lipstick core comprising:

providing a first mold having an internal volume generally corresponding to the lipstick core;

introducing liquified lipstick composition into the volume generally corresponding to the lipstick core and solidifying the lipstick composition to form the lipstick core;

providing a second mold having an internal volume generally corresponding to the lip cosmetic;

positioning the lipstick core into the internal volume generally corresponding to the lip cosmetic, leaving a lip liner volume; and

introducing liquified lip liner composition into the lip liner volume and solidifying the lip liner composition to form the coating of lip liner around the lipstick core;

wherein the liquified lip liner composition has a higher melting point than the lipstick composition.
